

I am outraged that the NAB would petition Congress to stop XM Satellite Radio from broadcasting local wether and traffic. I view this as a public service and find it to be one of the most valuable features of XM radio. If this service stops, there is nothing to replace it. Local radio features traffic and weather every 8 to 10 minutes at best. In a high traffic area, such as Northern VA and DC, that is no toften enough. If I choose to pay to receive this service, under what possible grounds would Congress take it away.

This is dumb and does not serve the public good.
